WILMINGTON, N. C.:

RIVER AND HARBOR.

Our River and Bar Improvements -Report of the Engineers_Payerable Progress and Prospects. New York, December 7, 1872.

GENERAL: The board of engineers organized by Special Orders No. 162, headquarters Corps of Engineers, December 12, 1871, assembled at Wilmington, North Carolina, January 24, 1872, and after an examination of the portion of the Cape Fear River south of that city, submitted a preliminary report, dated January 26, 1872.

The main operation at that time progress for the improvement of the river was the construction of a line of erib-work filled with stone, which, starting at the most northerly extremity of Smith's Island, was extending toward Zeke's Island, and, resting for the greater part of its length upon the remains of the stone dike built prior to 1857, had attained a length of 1,200

The sand was found to be accumulating against the jettee, particularly on the outside, and the board agreed in the opinion that should this accumulation continue as the work progressed. so as to afford protection to the cribs from the ravages of the worm, this general mode of construction would probably be suitable for the entire ength of the dike, but that it would be desirable to change the character of the structure for the remaining length, should the sand not accumulate with sufficient rapidity. At Baldhead it was found that the

extreme point had recently suffered considerably from abrasion, and that the jettee constructed prior to 1860 had been completely turned and an opening of more than 200 yards in width had been formed between it and the shore. Experimental brush-fences (of

simple kind) had been constructed on the beach of Smith's Island, and the propagation of native grasses attempted, both from seed and settings. A hydrographic survey was in cess by Coast Survey parties, which was expected to include the main out-

let and New Inlet. After full discussion, the board found itself unable at that time to present a full project for the improvement of the mouth of the river, recommending only the prosecution of the work for closing the outlet between Smith's and Zeke's Islands, in the belief that the operation would be an essential part of any plan of permanent improvement.

maps of the portion of the river below Federal Point and its outlets, which give much valuable information. The time has also been used in study of the subject.
The closing work between Smith's

and Zeke's Island has been exteded, secording to the original plan, to a depth of 2,400 feet, and for an additional length of 1,000 feet, the cribs are in place to receive the superstruc-

Additional brush fences have been built on Smith's and and Zeke's Islands, and the cultivation of grass has con-

tended toward Zeke's Island, the shoaling of sand has followed in a very marked manner. In some portions of its length the water continued to filter through the cribs and stone filling in perceptible streams. Sand in bags has been found to cheek these currents in a very inexpensive way. There was, in the Spring of 1872, a

threatening abrasion of the upper end of Smith's Island, which was promptly checked by a orib work of moderate The brush fences have served to

catch and retain much of the sand moving under the action of the wind, and to increase the general elevation of those parts of the beach upon which they have been placed. It is important that these masses of

sand thus accumulated should be held by some means from further motion, and, with this view, the cultivation of grasses has been regarded as of imporjustify further efforts in the same dishould be continued.

An interesting and important development of the recent survey has been one of the Cape Fear, and one of the what seems to be an effort of the forces People's, to be sold or run elsewhere." in play to open a channel at the Bald Head entrance, nearly in the position of the ancient channel existing before the opening of New Inlet. An improvement, though small, is

also reported in the western charnel and in the New Inlet; but the most marked change seems to be at the Bald Head entrance. The shape of the Bald Head point has changed considerbly, but apparently not to the disadvantage of the river.

It cannot be affirmed that these changes in the channels are certainly due to the work in progress between Smith's ground for believing the one to be the On the whole, the situation seems reliably and cheaply. decidedly encouraging

The naprovement of the Cape Fear

subject, the board make the following | fled recommendations;

1st. That nothing be done at present in the way of removing or extending the old jettee at Bald Head Point, or in Grand Jurisdiction of North Carolina. efforts to protect that point. 2d. That dredging be undertaken in All of the Lodges in the State were

In connection with the first recommendation it may be stated that the invited to attend,

removal or extension of the old jettee at Bald Head, would, it is belived, be a also be the permanent prevention of convened in this city yesterday. changes of shore-line at Bald Head, though considerable, are not disadtheir character and extent become interest.

condition thereabouts would be enwater in that direction be increased. and the entrance of the river by vessels be at one facilitated by giving a short posed of : and straight channel, and the comimmediately benefited.

3rd. There seems no reason for deviating from the present method of con- | warrant. Discharged on payment of | struction between Smith's and Zeke's Islands, which should therefore continue to the latter island, now distant only about 650 feet from the head of the advanced cribs. A cheaper process may answer for crossing the island: but even that portion should contain a solid nucleus for the retention of the sand in case of violent disturbance by gales or otherwise. The work should project beyond Zeke's Island, as far as may be, with due regard for economy, with a view of diminishing the area for

flow through New Inlet. 4th. The reasons for the fourth recomendation are obvious and need not be stated. 5th. A jettee from Federal Point

would exercise a material influence on the regimen of the river. Of course no one can predict its effects with certainty. The probabilities of its affording a nucleus for the retention of sand moving in from the sea, are strong, and that ultimately this accumulation may amount to the entire closure of the inlet. Should the jettee not have this effect, its construction to any length will proportionally diminish the area of flow through the inlet, and if the volume of the flow remains unchanged, the velocity will be increased and a greater scour obtained with a probable proportionate effect in deepening the channel.

of the jettee on the inlet may be expected to be advantageous to the navigation. If it does not close the inlet, it will probably improve its depth.

jettee on the river below, we may ex- clothing house in the United States. pect reasonably that it will deflect a large volume of water from the present crooked channel below New Inlet, and form a new and straighter channel. near the right bank of the river, giving a connection of the deep pocket there observed with the channel above New

Three very Superior Articles are offered by the Sulphurie Acid and Superphosphate Company of Charleston, S. C., viz:

ETIWAN GUANO.

A complete manure adapted to Catton, Grain and Tobacco, being the well known article heretofore offered at the very high grade of 18 per cent. dissolved Bone Phosphate of Lime, with the addition, as heretofore, of Peruvian Guano, Ammonia and Potash. Price Sas per ton, if paid on or before the 1st of April next, and 260 per ton, payable 1st November, 1873, without ETIWAN CROP FOOD.

A new article of about the same high grade of Soluble Phosphate, compounded with the elements of Cotton Seed in such a manner as to ensure one of the best fertilizers for Cotton and Grain, at a lower price than the Etiwas Guane. Price \$40 per ton, it paid on or before the 1st ETIWAN DISSOLVED BONE.

Averaging from 21 to 24 per cent, of Dissolved Bone Phosphate, and thus enabling the planter, by composting, to obtain two tons of half that grade at a saving of one-half cost of freight. Price \$35 per ton, if paid cu or before the 1st of April next; \$40 per ton, payable 1st November, 1873. TAKE NOTICE that all these fertilizers are of the highest grade of Soluble Phosphate, and
